

The LangTran system – setup information for connecting Android devices

Jim Henderson

Owner_LangTran@SIL.org

1 Introduction

Well, you have looked through the file [1_LangTran_setup.pdf](#), and you have decided to install the NextCloud client app on an Android tablet or phone to synchronize files from the LangTran system directly onto your mobile device. This will automatically synchronize files from the LangTran repository to a folder on your own device. As an ordinary user, you will be able to download software, but you will not be able to change anything in the on-line repository.

2 Install NextCloud on your device

This document is not yet complete. Please get in touch by email if you have problems or suggestions for what should be in it.

Open the Play Store app and type in nextcloud and tap the magnifying glass key.

Install NextCloud, and when that completes, go through the introductory slide show.

Tap the Home button and open Apps. Long press on the icon for NextCloud and drag it to one of your screens, such as your Home screen.

3 Keeping your app repository up-to-date

Whenever you have a good internet connection, make sure that the NextCloud program is running, and any updated apps should synchronize through to your Android device.
