

LangTran data flow diagram

Owner_LangTran@SIL.org

Developers put their programs up on their websites as usual.

The LangTran administrator runs the *Ketarin* program on the LangTran server every day to get any updated programs.

NextCloud users find that the NextCloud clients on their computers get the updates automatically, whenever they are available.

Whenever a *LangTranUpdate* user wants to update her installers, she runs the *LangTranUpdate* program to update the installers to her LangTranLocal folder, which may be on her hard disk or on a USB memory stick.
